

# **SALAMATDOC**

PRESENTED BY GROUP 1

# Problem

People tend to forget to forget to comply with their treatment plan, especially if long term and unconfined. This results in medical complications or miscalculations from a physician when assuming that the treatment plan was still followed

Research show that adults with ADHD fail to comply with their treatment plan on their first year

# Our Solution

A Token-base Secured Treatment Compliance Monitoring System for Patient-Doctor Management It establishes a way for doctors to communicate with their patients and track if the patient is taking their medication at the scheduled times and scheduling future appointments.

# Application Features

SalamatDoc features will include a login system for users, calendars to monitor health, and a mobile app for remote access and convenience that can be accessed at any time.

Account Login to lock access of features to patients only and Encrypted Messaging to preserve patient confidentiality.

A personal health calendar to monitor patient's daily intake, as well as regular notifications to inform patients ahead of time

Mobile app integration to ensure patients are within access anytime, anywhere

# Why Us?

SalamatDoc's objective is to assist doctors in treating patients and putting health as the number one priority through consistent monitoring and management.

Our vision is for SalamatDoc to become a digital pocket nurse that Doctors and Patients can trust to ensure proper recovery and a healthy lifestyle
